Emergency Procedures

- If a diver is lost, initiate emergency procedures.
- Determine the most appropriate search technique for the dive site.
- Secure necessary equipment.
- Recall other divers if there is an emergency.
- Organize rescue and first aid care and establish control.
- Alert rescue authorities (police, coast guard, Dive Desk).
- Prepare first aid equipment.
- Provide basic life support.

Basic Life Support

Assess scene safety. Remove the diver from the water if necessary, and ensure the safety of all rescuers.

- 1 Assess responsiveness. If the diver is unresponsive, immediately activate the emergency plan. Call the police, coast guard and ambulance).
- 2 Open the airway and check for breathing.
- 3 If the diver is not breathing normally, deliver 2 rescue breaths.
- 4 Begin CPR. Immediately deliver 30 compressions followed by 2 breaths.

Provide emergency oxygen at the highest possible concentration using the most suitable delivery device.

Immediately transport the injured diver to the nearest emergency medical facility. Provide emergency department personnel with details concerning the accident and the contact information for DAN included below.

Contact Information for DAN

919-684-8111 or 919-684-4DAN (4326) (Collect calls are accepted.)

Explain to the operator that you have a scuba diving emergency.
